

ER MAX LOAD Series Racing Springs

Congratulations on your purchase of the Eibach ER MAX load series racing spring. These MAX load springs designed to only accept a MAXIMUM load as specified in the Part#. The MAX load is listed to the right of the “ER” in the Part# followed by “K” denoting 1,000lbs.

For instance, Part# ER4.4K.1125.0800 has a MAXIMUM load of 4400lbs and Part# ER2.7K.1125.0350 has a MAXIMUM load of 2700lbs.

These special springs are precisely engineered products designed to be the lightest weight possible—while maintaining the durability necessary to provide consistent race-winning performance.

Do NOT apply a load greater than the MAXIMUM LOAD to any spring in this series racing spring. A loss of free length may occur.
